

Effective Communication Strategies for Deaf, Hard-of-Hearing, Blind, and Visually Impaired Patients

Did you know that according to the 2016 American Community Survey, 14.6% of adults age 65 and older have a hearing impairment and 6.6% have a vision impairment? People who identify as Deaf, or who are hard-of-hearing, blind, or visually impaired are also more likely to have other conditions including diabetes, cardiovascular health issues, and depression. Join us to learn how to best serve these and all patients in primary care and other ambulatory settings. The call format will include presentations by a patient, a provider, and a QIN-QIO, followed by an open discussion. Please come prepared to ask questions and share your experiences.

Wednesday, June 13, 2018
3:00 - 4:30 PM ET

Registration is Required.
Click here to register.

Learning Objectives:

1. Describe the benefits of effective communication with Deaf, hard-of-hearing, blind, and visually impaired patients.
2. Identify at least two strategies they can use to better meet the communication needs of Deaf, hard-of-hearing, blind, and visually impaired patients.
3. Access resources that can help them to better meet the communication needs of Deaf, hard-of-hearing, blind, and visually impaired patients.
